PROFILE

I'm a game developer with a strong foundation in coding and a deep passion for game development. I specialize in creating immersive gameplay mechanics, optimizing performance, and building engaging player experiences. With a solid understanding of both programming principles and game design, I bridge the gap between technical execution and creative vision.

EDUCATION

2023 - 2026

Bachelor of Science in Game Programming

Icat Design and Media , Chennai

SKILL

Unreal Engine | Unity Engine | Photoshop
C ++ | C # | Python
GitHub | Diversion

PROJECT

The Marooned

Gameplay Programmer | Unreal Engine 5 | Aug 2025 - Dec 2025

- Developed an interactive item pickup system with object detection and interaction prompts.
- Implemented dynamic highlighting for interactable objects to improve player feedback.
- Designed and integrated an inventory system for collecting and managing gameplay items.
- Created an immersive item-holding interface displaying collected objects in the player's view.
- Developed gameplay systems supporting clue collection and puzzle-solving mechanics in Unreal Engine 5.

Mystic Dash

Gameplay Programmer | Unreal Engine 5 | June 2026

- Developed third-person movement and obstacle traversal mechanics for a multiplayer-inspired platforming experience.
- Implemented a checkpoint and respawn system to provide seamless progression after player failure.
- Created dynamic obstacle systems including moving platforms, rotating hazards, and timed challenges.
- Developed finish-line and level progression mechanics using Blueprint event systems.
- Designed responsive gameplay interactions and visual feedback to improve player experience.
- Optimized modular gameplay systems using Unreal Engine 5 Blueprints for maintainability and performance.
